COMPUTER ORGANIZATION AND ARCHITECTURE

ASSIGNMENTS

Module-I

Q 1) Describe the basic opertaional concepts of a computer with a suitable example.

Q 2) Represent the decimal values 5,-2, 14,-10, 51 and -43 as signed 7-bit numbers in the binary formats a) Sign and magnitude

b) 1's Compliment

C) 2's Compliment.

Module-2

Q 1) Explain the bus structure, bus operations and the need for bus Orbitration.

Q 2) Analyze the transfer of data among the processor, Memory and I/O devices using a given bus structure.

Module-3

Q 1) Explain the organization and working of semiconductor RAM. Compare SRAM and DRAM with respect to cell organization, speed, Cost, Power Consumption and Applications.

Q 2) Explain associative mapping Cache memory. Describe the address Comparison process and analyze it's advantages and limitations.
